- W And deliver results up to 2 years or more!

* If nerve-sparing surgery was performed.

**They've turned around
their sex lives...**

"One weekend, after about my 4th Big D Wave treatment, I was able to have sex with my wife multiple times without using Trimix. I haven't been able to do that in years."

—Charles, 46 years old

"My ED isn't always an issue, but I was only able to have sex with my wife once to twice a week. Now we are doing it twice in a weekend. It seriously feels as if I am in my 20s again because of the size of my erections."

—Michael, 43 years old

"My erections are harder, they last much longer and they are easier to achieve. I hadn't had any 'morning wood' in over 6 months before starting this treatment. Now I have it every day. It's noticeably better than it has been for many, many years."

—Anonymous, 47 years old

You can, too!

SOLUTION

**for ED or
Diminished
Sexual
Performance.**

Big D Wave™

Whether you're a thirty-something who's lost some of that zip...
Or a middle-ager with significant erectile dysfunction...

BIG D WAVE™ THERAPY CAN REVITALIZE YOUR SEX LIFE

HERE'S HOW IT WORKS:

Big D Wave™ uses extracorporeal shockwave therapy (ESWT), or pulsed acoustical sound waves, to unblock blood vessels in the penis and stimulate the growth of new ones

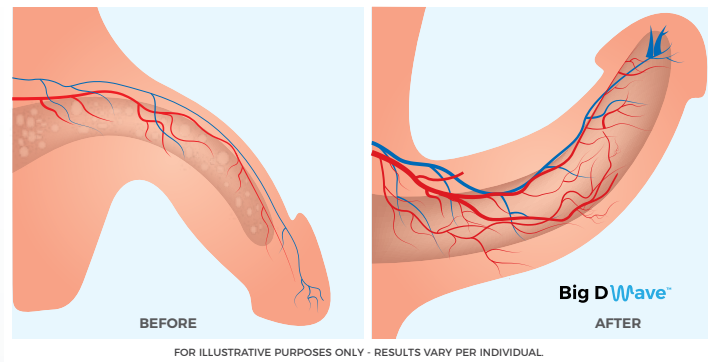

Result? Greater blood flow means strong, firm erections, increased sensation and more intense and spontaneous orgasms.

No pills, no side effects, no painful procedures.

Big D Wave™ is totally noninvasive, requires no anesthesia and is performed in-office in just 20 minutes. Many see same-day results. And with 10 sessions, benefits can last up to 2 years and longer.

Who can benefit most from Big D Wave treatments?

Men who have vasculogenic ED (lack of blood flow), ED caused by diabetes, or are unresponsive to medications are good candidates for **Big D Wave™** treatment. It's also been successful in correcting Peyronie's disease, a painful curvature of the penis.

More than 40 studies attest to ESWT's Effectiveness

Using sound therapy, up to 75% of those who were taking oral medications to treat ED were able to discontinue the drugs and perform intercourse successfully. Visit our site for more findings.
